Data Centre build Services: Organizations are centralizing their IT operations by cultivating central data centers. We aim to help in this regard by utilizing its wide range of specializations to offer the following services: virtualization, to improve the efficiency of existing resources in a cost-effective manner; data migration, which includes applications servers and physical shifting of equipment while addressing core elements; Cooling systems to ensure ideal temperatures within the center; Raised flooring to accommodate the massive amounts of cable; uninterrupted water supply, to maintain operations; fire suppression systems that are environmentally friendly and non-toxic; and water detection, through the installation of water sensitive cables designed to address any leaks effectively.

ELV SOLUTION IN BUILDING:

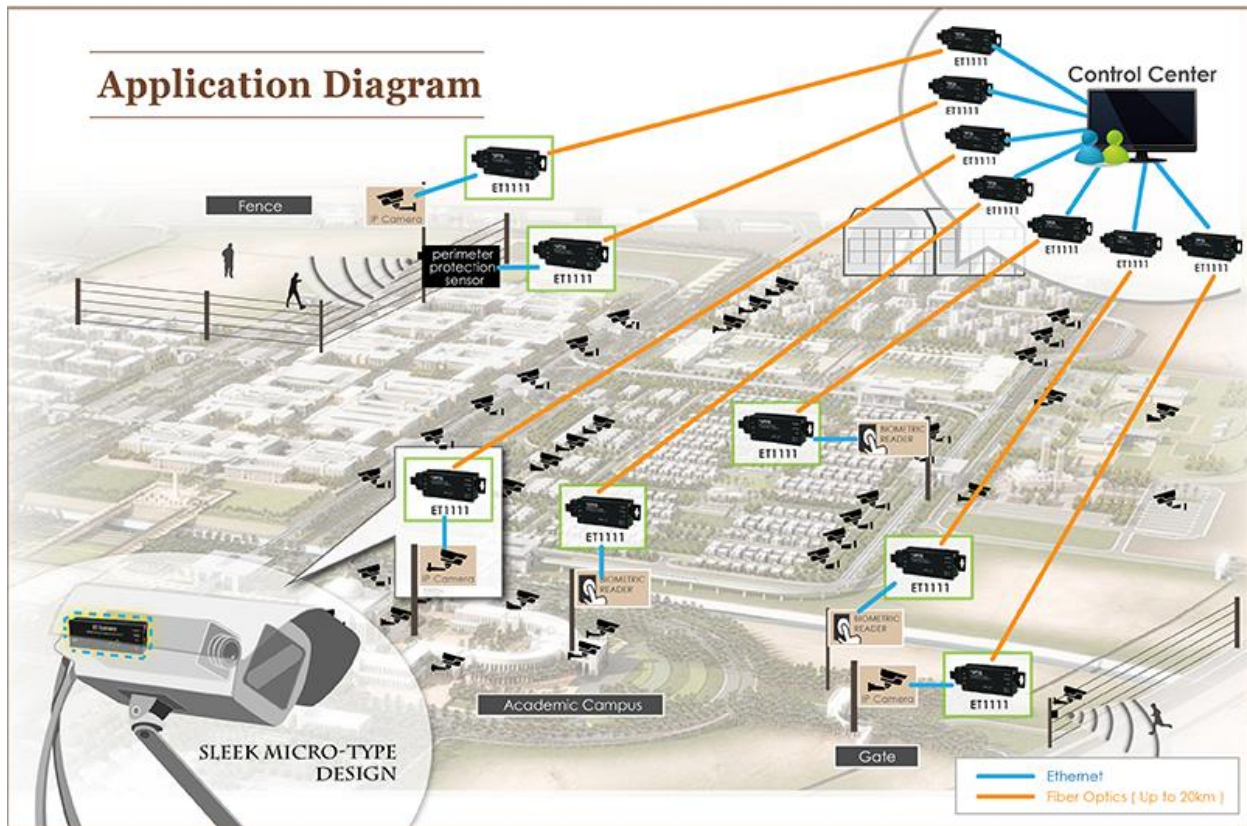

Enterprise CCTV Solutions

We design and install complete CCTV systems including fully equipped control rooms as well as other security surveillance solutions.

Industrial Grade CCTV Solutions

CCTV Systems for Industrial Environment, Warehouse, Manufacturing

Industrial CCTV System Checklist

Industrial sites tend to be large in nature and as such need a lot of planning when installing [security systems](#).

We will highlight some key things to take into account when you are looking at security for your site.

Before you take a walk

A few key things to consider before you take a walk around your site:

- Why do you need the [CCTV](#) in place? Is it only to act as a deterrent? Health and Safety? Or do you need it for production purposes?
- Do the cameras need to be discreet?
- Is a live feed required? Perhaps to a control room?
- What about the recordings? Do you need somewhere to store them?
- Do you need the cameras indoors or outdoors? Or both?

Take a walk

Take a walk around your site and look at the following:

- **Location** – Where do they need to be located? Are there any blind spots that need covering?
- **Height** – How high do you need the cameras to be?
- **Privacy** – Are there any specific areas where you need to be careful about breaching other businesses privacy or even a residential area?
- **Power access** – Can you easily get power to the cameras? Will you need extra [cabling](#)?
- **Lighting** – Any sun traps where the sun will block a clear visual? How about areas that will require monitoring at night – is there sufficient lighting?

Think about the nitty gritty

Now it's time to think more about the system you want in place.

- **Image quality** – How clear do you need the image to be? Do you need to see down to a finite detail?
- **Lighting** – Do you need low-level lighting or a camera to be able to see in pitch black, darkness? Or does it need to have the ability to see infra-red?
- **Audio** – Do you need audio?
- **Fixed or rotational** – Do you need the camera to zoom and focus, pan or does it just need to be in a fixed position?
- **Broadband** – Do you have sufficient [broadband](#) for the cameras to transmit the recordings?
- **Maintenance** – Who is going to be checking that the cameras are operational on a regular basis?

Public Safety by our CCTV Solutions:

Smart AI Thermal CCTV Camera for COVID:

Access Control Solutions

We design and implement various Access Control systems based on solutions from multiple vendors.

IPTV & SMATV

We design and provide Satellite Multi-Access TV (SMATV) services from small systems to large solutions with tens of distributed channels for hundreds of users.
